| PT - Pointed                  | U - Universal            |

All RCBS Bullet Moulds are machined to exacting specifications ensuring accurate and clean casts time after time.

**NOTE:** All moulds are shown slightly smaller than actual size. Unless noted otherwise, all RCBS bullet moulds are double cavity type. Each mould is identified by a five or six digit number, followed by two or three letters. The first two or three digits identify bullet caliber, the last three are bullet weight in grains. (Round Balls are identified by caliber only.) Bullet weights are established by the following methods:

- Rifle & Silhouette Bullets- Linotype alloy.
- Pistol, Black Powder Silhouette and C Sharps Arms Bullets- An alloy of one part tin to ten parts lead.
- Cowboy Bullets- An alloy of one part tin to twenty parts lead
- Round & Minie Balls- Pure lead. +Available in single cavity only.
